

TENAXFIL ANTISTATIC®

TENAXFIL ANTISTATIC® belongs to the range of antistatic and static electricity squanderer sewing threads, developed by Cittadini spa in order to meet the growing needs of the making-up and personal protective equipment (PPE) industry where the electrostatic charge and the electrical sparkles may represent a serious problem.

TENAXFIL ANTISTATIC® is a high-tenacity sewing thread that, thanks to its linear resistivity, gives the opportunity to achieve the requirement of ISO DIN-EN 1149 and allows to create a conductor bond in the seams which is something that would not be possible with normal sewing threads.

TENAXFIL ANTISTATIC® is available in a range of different colors and thickness based on the client needs.

Ticket Nm	Make-up (standard)
60	4.000 mt
40	3.000 mt
30	2.000 mt
20	1.500 mt

Packaging: box of 12 spools

Main applications:

- Antistatic protective clothing
- Protective wear
- Protective footwear
- Filtration
- Technical applications

Key benefits:

- Prevent static build-up
- High tenacity antistatic thread
- Customizable antistatic capability
- Melting point: 260°C
