

## NYLON KNOTLESS NET

This net is mainly used for aquaculture cages, due to its strength, durability and excellent weight/performance ratio.

It is made of top quality polyamide fibre, treated against UV rays, woven without a knot in diamond mesh, to facilitate the setting up during cage construction operations, in the normal or super-knotless version, to ensure a high degree of knot holding and ladderproof resistance. It can also be produced in hexagonal mesh.

A special thermofixing system ensures the stability of the net in water over time.

### Characteristics:

- Excellent resistance to abrasion and bites from marine predators.
- High resistance to tension.
- Easily washable.

It can be produced in natural colour or sample-dyed, with special finishes.

Titles	Mesh size	Net width	Net lenght
210/4 - 210/6 - 210/9... 210d/36, 210d/48, 210d/72 fino a 210d/700	From 8 mm upwards	Up to 1520 meshes	Upon request
